

## Polytop MX<sup>®</sup> 650

### Durable ejection material for folding carton

Folding carton is used for packaging that has to catch the eye; a crucial aspect in directing the decision to buy.

Accuracy of the die cutting process is of key importance, since any deviation in the dies has consequences for the end result. Polytop MX<sup>®</sup> 650 is a durable ejection system for flatbed dies, that ties in seamlessly with the strict requirements imposed on working with folding carton.

Thanks to a variety of hardnesses, recognisable by their individual colours, the die cutting process is careful and precise. The result is higher production output with very low tolerance values. You can work faster and more neatly thanks to minimal ink absorption, at lower cutting pressure. The end result is a perfect finished product.

#### Pioneering in ejection material

PolyMX develops, produces and supplies synthetic products and offers professional knowhow and support. The high-end solutions are used in the die cutting and technical industry and in transport, equitation and the maritime sector. Thanks to the high quality and durability of Polytop MX<sup>®</sup>, PolyMX is considered as a pioneer in the die cutting industry. In addition, the company was the first to introduce the colour system to distinguish between degrees of hardness.

Complementary to supplying products, PolyMX also offers technical support during the implementation of the system. A must where it concerns working with an ejection systems which enables maximum performance die cutting.

#### We challenge you, to challenge us!

Polytop MX<sup>®</sup> offers a solution for every die cutting challenge. Would you like to experience the advantages for yourself? Then contact your die maker or contact PolyMX directly in order to carry out a test on your own machine. For an overview of PolyMX partners, check the website: [www.polymx.com/dcs](http://www.polymx.com/dcs)

#### Finer end products

- Less and smaller nicks
- Clean cut edges
- Less angle hair
- Less ink absorption

#### Faster production process

- Extreme long lifetime of ejection material
- Less cutting pressure
- Shorter set-up times of machine
- Less dust

#### Maximum performance die cutting with the long-lasting ejection system of PolyMX!
